🪪 PROFILE

Full Stack Developer | Self-Taught | Backend & Security
I started programming in February 2024 and quickly evolved from frontend basics to building production-ready applications. What sets me apart is my rapid learning ability and hands-on approach - I don't just learn technologies, I master them through real projects. Currently specializing in Java Spring Boot and Python for backend development, with deep expertise in API security, database architecture, and scalable system design. My portfolio showcases 20+ projects ranging from microservices with Docker to real-time applications with advanced authentication systems.
